

Packaging Materials - Paint Cans and Locking Rings

The Compliance Center, I.C.C. is experiencing production problems and cannot provide Locking Ring RL-CJ2. This item works in conjunction with a 5.5 Liter paint can, MT-PC5.5L to assure 95 kPa pressure conformance for air shipments of hazardous materials. These materials are called out for use in the DoD Performance Oriented Packaging Program. Effected POP Test Reports are for fiberboard boxes with the paint cans used as intermediate or inner packagings. The test report numbers are: F042, F050, F051, F052A, F053.

Shippers may use the recommended RL-CJ2 rings with the MT-PC5.5L cans as long as supplies last. In place of the parts cited above, shippers may substitute I.C.C. Locking Ring RL-CJ7 with I.C.C. Paint Can MT-PCTL for those parts cited in the effected test reports. The new ring only works with the new can. The parts may not be intermixed, i.e. the RL-CJ7 ring may NOT be applied to the MT-PC5.5L can, it does not maintain proper seal. Configurations using other manufacturer locking rings are not effected.
